SCADA / HMI Automation

SYSTEMS

At SATIC we integrate the layers that critical projects rarely deliver together. Twenty years deploying technology in sectors where availability and security leave no room to improvise. No shortcuts, no subcontracting what's critical, and a single point of contact.

What follows is the operational detail of this service: what it covers, how we deliver it, and why our way of working it is different. If something doesn't fit your case, we adapt it. If what you need doesn't exist on the market, we build it.

Three technologies, one control system

AREAS

01

SCADA

Remote supervision, control, and data acquisition. A command cabin that improves operational decision-making.

- Real-time telemetry and alarms
- Historization and analytics
- Secure remote access

02

Human-Machine Interfaces that democratize access to SCADA and let you operate the plant intuitively.

- Industrial touchscreens
- Process visualization on the plant floor
- Roles and operation traceability

03

PLC

Programmable logic controllers that orchestrate machines, integrate SCADA, and connect to the industrial ecosystem.

- Programming and configuration
- Multi-vendor integration
- Industrial communication (Modbus, Profinet, OPC UA)

What your plant gains by combining SCADA and HMI

BENEFITS

01

Safety

Reduction of human error in critical tasks and full traceability of operations.

02

Productivity

Automation of repetitive processes, fewer stoppages, and greater uniformity in production.

03

Data and analytics

Massive capture of variables to optimize the process and anticipate maintenance.

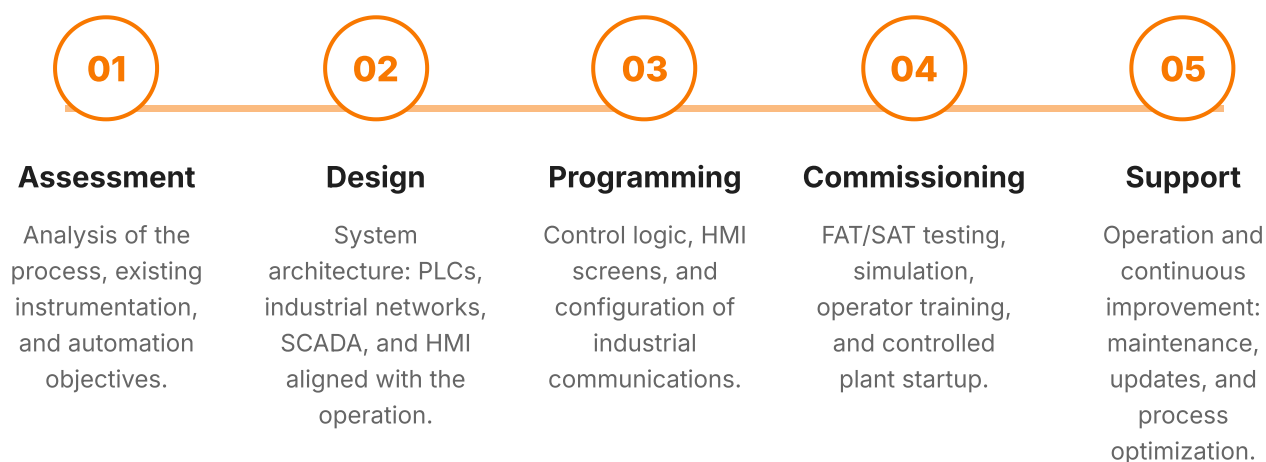

04

Accessibility

HMI democratizes access to SCADA: any operator interacts with the process intuitively.
