Occupancy and vehicle control

SYSTEMS

At SATIC we integrate the layers that critical projects rarely deliver together. Twenty years deploying technology in sectors where availability and security leave no room to improvise. No shortcuts, no subcontracting what's critical, and a single point of contact.

This catalog lays out how we approach this solution: what gets deployed, how we deliver it, and where it adds real value. If something doesn't fit your case, we adapt it.

Three technologies that work together

CAPABILITIES

01

Occupancy control

Active identification of people with RFID readers at every entrance, reinforced by analytic IP cameras that detect movement.

- Active RFID readers at entry points
- Active RFID tags for personnel
- IP cameras with analytics and recording

02

Vehicle control

Automatic license-plate reading via analytic IP cameras placed at the ideal height at every entrance and exit.

- License-plate recognition (LPR)
- Dynamic whitelists and blacklists
- Vehicle and emissions database

03

Telemetry and monitoring

A unified view by facility, zone, or tunnel with real-time telemetry and a green/red status for each entry point.

- Dashboard with status by zone
- Transit and authorization details
- History exportable to Excel

The entire operation from a single panel

REMOTE MANAGEMENT

01

Company management

Adding, removing, and editing companies with all their associated data. Roles and permissions by organization.

02

Personnel and vehicles

Full management of additions, removals, edits, and authorization of people and vehicles (license plates, tags).

03

Historical search

Dynamic filtering by date, tunnel, tag number, license plate, company, direction (IN/OUT), or operation ID.

04

Reports and export

Complete listings exportable to Excel with automated email delivery. Tablet access with username and password.
