Video, access control, intrusion, and technical alarms from a single console.

VMS, onboard analytics, access control, and technical alarms, all correlated. Operator-guided procedures, full traceability for auditing and investigation, and a single room to decide in.

At SATIC we integrate the layers that critical projects rarely deliver together. Twenty years deploying technology in sectors where availability and security leave no room to improvise. No shortcuts, no subcontracting what's critical, and a single point of contact.

This catalog lays out how we approach this solution: what gets deployed, how we deliver it, and where it adds real value. If something doesn't fit your case, we adapt it.

What supports a serious operations center.

01

VMS and CCTV with onboard analytics

VMS and CCTV with onboard analytics IP cameras with detection, classification, and counting. Redundant storage, evidence export.

02

Multi-level access control

Multi-level access control Zones, schedules, profiles, anti-passback. Integration with identification and HR.

03

Intrusion and perimeter protection

Intrusion and perimeter protection Layered detection, 24/7 monitoring, integration with video and procedures.

04

Integrated technical alarms

Integrated technical alarms Gas, smoke, leaks, overheating, electrical failure. Correlation with camera and operator.

05

Operator-guided procedures

Operator-guided procedures Step-by-step flows for each type of event. The operator doesn't improvise: they execute.

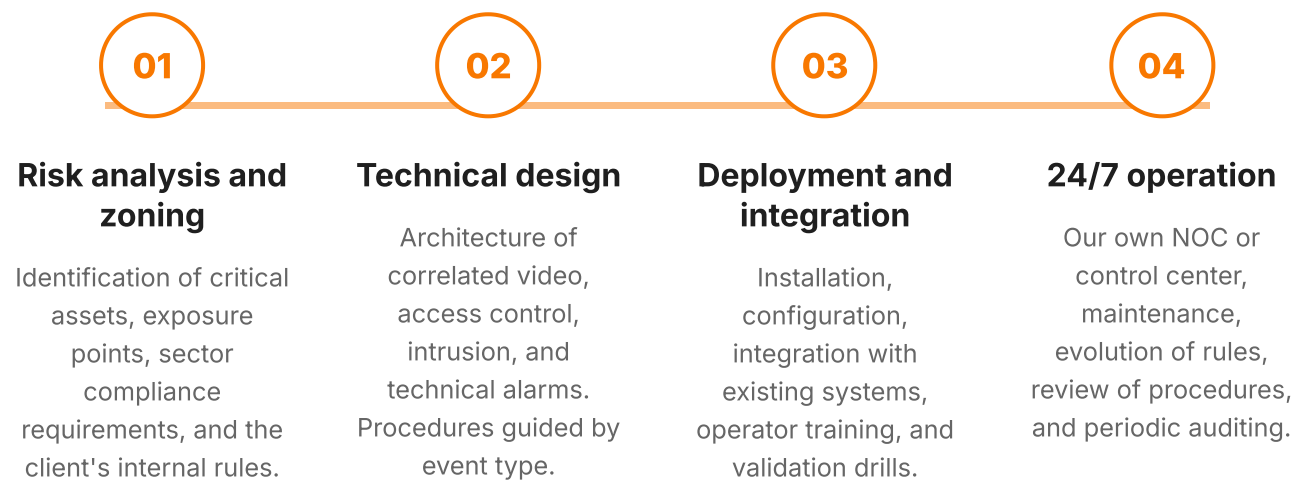

06

Traceability and auditing

Traceability and auditing A queryable, exportable, signed history. Ready for inspection and for court if it comes to that.

How we deploy a serious operations center.

From risk analysis to 24/7 operation.

What an operations center solves every day.

Typical scenarios where having a single console changes the response.

01

Perimeter detection and response

Layered intrusion, automatic visual validation, escalation to procedure without wasting time on emails.

02

Guided emergency management

A technical alarm + identification + camera trigger a procedure. The operator doesn't improvise: they follow the signed protocol.

03

Signed traceability

An exportable, signed history, with evidence ready for inspection or court. The timeline is reconstructed without gaps.

04

Procedure review

Living documentation, records of operator actions, review of response times and compliance.

05 · NEXT STEP

Does your operations center have a single view or separate screens?

We design the supervision architecture your operation demands, with a single console for the operator.
